SUMMARY

React Native engineer with 2.6+ years shipping 15+ cross-platform apps to the App Store and Play Store — specializing in AI-powered mobile experiences: real-time AI chat, voice AI, streaming LLM responses, offline sync, push notifications, and WebRTC. Drove a live JS→TypeScript migration that eliminated a recurring runtime-error class, owned Stripe/PayPal billing with zero reconciliation failures, and cut API latency 35%. Integrates cloud and on-device AI (Gemini, Groq, Whisper) and owns the release pipeline end-to-end — signing, store compliance, and monitoring.

EXPERIENCE

Infinite Open Source Solution LLP, Full Stack Developer – Calicut, Kerala Nov 2023 – Present

- **Cut feature delivery time 30% across 20+ web and mobile apps** by architecting a reusable cross-platform TypeScript component library that replaced per-project rebuilds.
- Designed and implemented an **Offline-First geolocation tracking system** using React Native and SQLite, enabling reliable background location capture, local data buffering, and retry-based recovery to ensure seamless workforce tracking even during prolonged network outages.
- **Eliminated an entire class of production runtime errors** via a full JS-to-TypeScript migration on a live React Native codebase with strict typing and type-safe API contracts.
- **Shipped 5+ React Native apps to App Store and Play Store independently** by owning the full release pipeline — signing, build configs, store compliance, and staged rollouts.
- **Processed Stripe and PayPal subscriptions with zero reconciliation failures** by owning end-to-end billing — webhook verification, idempotent reconciliation, and retry logic.

PORTFOLIO PROJECTS

AI Life Assistant Super App (React Native)

React Native • TypeScript • Gemini API / Groq API • Whisper • WebSockets • Reanimated • Native Modules (Swift)

- **Built a voice-first AI assistant** with streaming LLM chat, Whisper transcription, TTS playback, and tool calling — 60fps message animations on iOS and Android.
- **Built a RAG pipeline** — Gemini embeddings stored in PostgreSQL with pgvector, HNSW-indexed cosine similarity search injected into the LLM system prompt — and hardened the API with JWT refresh-token family rotation and Redis-backed, multi-instance-safe rate limiting.
- **Engineered a custom native audio module (Swift)** for low-latency mic capture and VAD, plus offline-first SQLite sync and push (FCM/APNs) for proactive agent actions.

AI-Powered Real-Time Collaboration Platform (React Native)

React Native • TypeScript • Yjs (CRDT) • WebSockets • WebRTC • Groq API

- **Built a CRDT-based collaboration app (Yjs)** with live presence, typing indicators, and conflict-free offline edits across iOS and Android.
- **Integrated WebRTC voice notes and inline AI** — streaming Groq completions, summarization, and tool calling on document selections at 60fps via Reanimated.

SKILLS

Languages: TypeScript, JavaScript (ES6+); Python (familiar)

React Native & UI: Expo, Redux Toolkit, React Query, Reanimated, Gesture Handler, Native Modules

Mobile Platform: Push Notifications (FCM / APNs), Background Tasks, Geolocation, In-App Purchases, App Store / Play Store releases

Real-Time & AI: WebSockets, WebRTC, offline sync (SQLite), Gemini & Groq APIs, Whisper, streaming chat, tool calling

Backend & Data: Node.js, Express, REST APIs, JWT / OAuth, MongoDB, MySQL, Redis

Tooling & DevOps: Git, GitHub Actions CI/CD, Docker, AWS, Xcode, Android Studio, Sentry, Claude Code / Cursor / Copilot

EDUCATION

BBA, SJES College of Management, Bangalore North University – Bangalore, India June 2019 – Oct 2022
