SUMMARY

React Native engineer with 2.5+ years building and shipping cross-platform apps to the App Store and Play Store. At work, drove a live JavaScript→TypeScript migration that removed a recurring class of runtime errors, built Stripe, PayPal, and Razorpay subscription billing with idempotent webhook reconciliation, and cut API latency 35%. Builds AI-powered mobile features — streaming LLM chat, voice and transcription, and offline sync — on free-tier and open-source tooling (Gemini, Groq, on-device Whisper), and owns the release pipeline end-to-end: signing, store compliance, and monitoring.

EXPERIENCE

Infinite Open Source Solution LLP, Software Engineer – Calicut, Kerala

Nov 2023 – Present

- **Cut feature-delivery time ~30%** by building a reusable cross-platform TypeScript component library, adopted across 15+ web and mobile projects to replace per-project rebuilds.
- **Built an offline-first geolocation tracking system** with React Native and SQLite — background location capture, local buffering, and retry-based recovery for reliable workforce tracking through prolonged network outages.
- **Removed a recurring class of production runtime errors** via a full JavaScript-to-TypeScript migration on a live React Native codebase, with strict typing and type-safe API contracts.
- **Shipped and maintained the company's cross-platform React Native apps** on the App Store and Play Store, owning the full release pipeline — signing, build configs, store compliance, and staged rollouts.
- **Built Stripe, PayPal, and Razorpay subscription billing** with idempotent, webhook-driven reconciliation and retry logic for dependable recurring payments.

PORTFOLIO PROJECTS

Self-initiated projects, built on free-tier and open-source infrastructure; no commercial users. Source: github.com/MohdRinshadmi.

AI Life Assistant Super App (React Native)

React Native • TypeScript • Gemini & Groq APIs (free tier) • Whisper (whisper.cpp, on-device) • WebSockets • Reanimated • Native Modules (Swift)

- **Built a voice-first AI assistant** with streaming LLM chat, Whisper transcription, TTS playback, and tool calling — 60fps message animations on iOS and Android.
- **Built a RAG pipeline** — Gemini embeddings stored in PostgreSQL with pgvector, HNSW-indexed cosine similarity search injected into the LLM system prompt — and hardened the API with JWT refresh-token family rotation and Redis-backed, multi-instance-safe rate limiting.
- **Engineered a custom native audio module (Swift)** for low-latency mic capture and VAD, plus offline-first SQLite sync and push (FCM/APNs) for proactive agent actions.

AI-Powered Real-Time Collaboration Platform (React Native)

React Native • TypeScript • Yjs (CRDT) • WebSockets • WebRTC • Groq API

- **Built a CRDT-based collaboration app (Yjs)** with live presence, typing indicators, and conflict-free offline edits across iOS and Android.
- **Integrated WebRTC voice notes and inline AI** — streaming Groq completions, summarization, and tool calling on document selections at 60fps via Reanimated.

SKILLS

Languages: TypeScript, JavaScript (ES6+); Python (familiar)

React Native & UI: Expo, Redux Toolkit, React Query, Reanimated, Gesture Handler, Native Modules

Testing: Jest, Detox, React Native Testing Library

Mobile Platform: Push Notifications (FCM / APNs), Background Tasks, Geolocation, In-App Purchases, App Store / Play Store releases, Fastlane

Real-Time & AI: WebSockets, WebRTC, offline sync (SQLite), Gemini & Groq APIs (free tier), on-device Whisper, Ollama (local LLMs), streaming chat, tool calling

Backend & Data: Node.js, Express, REST APIs, JWT / OAuth, PostgreSQL (pgvector), MongoDB, MySQL, Redis

Payments: Stripe, PayPal, Razorpay (webhook-driven subscriptions & order lifecycle)

Tooling & DevOps: Git, GitHub Actions (CI/CD), Docker, AWS (free tier), Xcode, Android Studio, Sentry (free tier); AI-assisted dev: Continue.dev, Cline, Aider

EDUCATION

BBA, SJES College of Management, Bangalore North University – Bangalore, India June 2019 – Oct 2022
